## Introducing Punkcoin

Punkcoin is a cryptocurrency, the rebel under the cryptocurrencies. It is based on the Ethereum platform, using its ERC20 standard with the token symbol PKC. The contract source code is verified and published on Etherscan.

There will be a maximum supply of 1,000,000,000,000,000 Punkcoins.

The complete amount will be minted during an ICO, so the total supply equals the maximum supply.

### But why is Punkcoin different?

Punk is a youth culture. Its attributes are

provocative look,  
rebellious attitude  
and non-conforming behaviour.

And so is Punkcoin. Of course it stands for a decentralized finance (DeFi) system. But while Bitcoin and some altcoins are more and more discovered by big institutions, Punkcoin is mainly the investment for private individuals.

And with the total supply of 1,000,000,000,000,000 tokens everyone is able to own many Punkcoins.

Punkcoin is inspired by CryptoPunks and Bastard Gan Punks (V2). It is a meme token. But a different one. Punkcoin is the most rebellious token. This attribute offers the possibility to outperform and contraperform other cryptocurrencies.

Its design shows exactly what we mentioned before. There are obvious similarities to Bitcoin, Litecoin, Bitcoin Cash and Dogecoin, but the pink colour and the line at the top of the P - a tribute to punk hairstyles - signal uniqueness and non-conformity. One more evidence is the black colour of this whitepaper.

### The distribution of Punkcoin

As mentioned before, the maximum supply will be minted during an ICO. The half of it - 500,000,000,000,000 tokens - will be offered to investors during the ICO.

The other half is reserved for marketing (15 %), general reserve (10 % - purpose later in the whitepaper), partners (10 %) and team (15 %).

With these strict rules we ensure a wide distribution without majorities. This is a key to a fair market price, also in the long term.

As you can see, the project provides a solid distribution plan to build a stable basement for fairness, but also success. Let us grow together.

## **Punkcoin ICO**

Our ICO will have a maximum duration of 30 days. During this time investors are invited to invest in Punkcoin. It will be an increasing price ICO with a double final price and a soft and hard capture.

During the ICO all of the funds are frozen. After the ICO investors can claim their Punkcoin tokens or, in case of no success, their Ethereum refunds.

The ICO contract source code is verified and published on Etherscan.

Following the key parameters of the Punkcoin ICO

Parameters	Value
Token name	Punkcoin
Token symbol	PKC
Token price (ICO start)	0.0000000000002 ETH
Token price (ICO end)	0.0000000000004 ETH
Soft capture	1 ETH
Hard capture	2,000 ETH

### **Additional info and next steps**

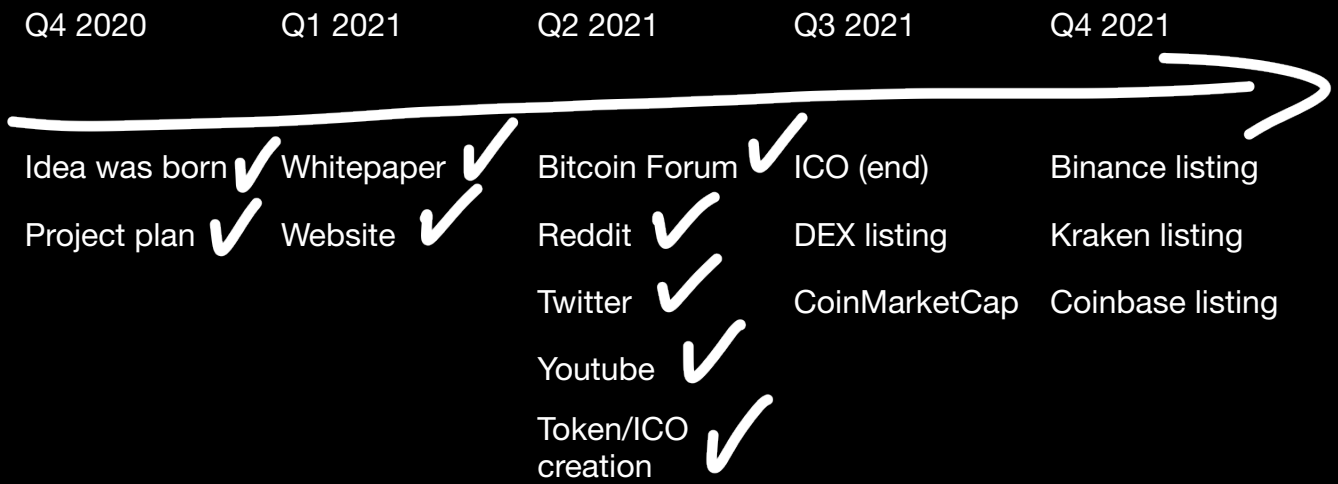

Before and during the ICO there will be no Punkcoins at all. After the ICO investors, partners and team can claim their Punkcoin tokens. This is the moment when a fair trade will start.

Our intention for the beginning is to get listet at several decentralized exchanges, e.g. Uniswap is obligatory.

We are not going to begin listing. But a part of our token reserve will be used to build a liquidity pool on Uniswap to ensure listing, if necessary.
